

# Moderna COVID-19 Vaccine

## Standing Orders for Administering Vaccine to Persons 18 Years of Age and Older

### Purpose

- To reduce morbidity and mortality from coronavirus disease 2019 (COVID-19) by vaccinating persons who meet the criteria established by the Centers for Disease Control and Prevention's Advisory Committee on Immunization Practices (ACIP).

### Policy

- Where authorized under state law, standing orders enable eligible nurses and other healthcare professionals (e.g., pharmacists) to assess and vaccinate persons who meet the criteria in the "Procedure" section below without the need for clinician examination or direct order from the attending provider at the time of the interaction.

### Procedure

Assess persons 18 years of age and older for vaccination with Moderna COVID-19 Vaccine based on the following criteria:

- Primary-series vaccination
  - If the recipient has received 1 previous dose of Moderna COVID-19 Vaccine, administer the second dose at an interval of least 28 days (but preferably before 42 days).<sup>†</sup>
  - If the vaccine product given as the first dose cannot be determined or is no longer available, any mRNA COVID-19 vaccine product may be administered at least 28 days after the first dose.
  - If 2 doses of an mRNA vaccine have been administered or a single dose of Janssen COVID-19 Vaccine has been administered, the person is considered fully vaccinated. Those receiving a 2-dose mRNA series may need an additional dose (moderately to severely immunocompromised persons) at least 28 days after completing a two-dose series or a booster dose (at least 6 months after completing a primary mRNA series). All persons who received a single dose Janssen COVID-19 Vaccine should get a booster dose of a COVID-19 vaccine at least 2 months (8 weeks) after receiving the primary dose.
- Persons with a history of myocarditis or pericarditis:
  - If history is prior to COVID-19 vaccination may receive any FDA-authorized COVID-19 vaccine after the episode of myocarditis or pericarditis has completely resolved
  - If myocarditis or pericarditis occurred after the first dose of an mRNA vaccine, defer the second dose of an mRNA COVID-19 vaccine. Administration of the second dose of an mRNA COVID-19 vaccine series can be considered in certain circumstances after the episode of myocarditis or pericarditis has completely resolved. Considerations can be found at <https://www.cdc.gov/vaccines/covid-19/clinical-considerations/covid-19-vaccines-us.html#underlying-conditions>
- Persons who are moderately to severely immune compromised\*
  - For a person aged  $\geq 18$  years who received an mRNA vaccine: Consider an additional vaccine dose at least 28 days after an initial 2-dose primary series. Administer the same vaccine product as for the initial 2-dose primary series. If the vaccine product cannot be determined or is no longer available, administer either mRNA COVID-19 product. Administer 0.50 mL dosage.
  - For a person aged  $\geq 18$  years who received a primary dose of Janssen COVID-19 Vaccine: Consider a booster dose at least 2 months (28 days) after completing the initial dose. The booster dose may be any FDA-authorized or approved vaccine product. A Moderna booster is 0.25 mL dosage.
- Persons who have received HCT or CAR-T-cell therapy
  - Revaccinate persons who received doses of COVID-19 vaccine prior to receiving HCT or CAR-t-cell therapy should be revaccinated with a primary series at least 3 months (12 weeks) after transplant or CAR-T-cell therapy.
- Booster doses
  - Administer a booster dose (0.25 mL) at least 6 months after completion of the Moderna vaccine primary series to:
    - » People aged 65 years and older
    - » Residents aged 18 years and older in long-term care settings
    - » People aged 50-64 with underlying medical conditions (<https://www.cdc.gov/coronavirus/2019-ncov/needextra-precautions/people-with-medical-conditions.html>)
  - Administer a booster dose, based on individual benefits and risks, at least 6 months after completion of a Moderna primary series to:
    - » People aged 18-49 years with underlying medical conditions (<https://www.cdc.gov/coronavirus/2019-ncov/need-extra-precautions/people-with-medical-conditions.html>)
    - » People aged 18-64 years at increased risk for SARS-CoV-2 exposure and transmission because of occupational or institutional setting (<https://www.cdc.gov/coronavirus/2019-ncov/vaccines/booster-shot.html#Know>)
    - » Use of heterologous booster doses is allowed.
  - An additional booster dose of Moderna COVID-19 Vaccine may be given to moderately to severely immunocompromised people who received the Janssen COVID-19 Vaccine primary series and booster dose at least 6 calendar months after their 2nd dose.
    - » Inform recipients, especially males 12 through 29 years of age and their parents/legal representative (when relevant) of the possibility of myocarditis or pericarditis following receipt of mRNA COVID-19 vaccines and the need to seek

# Moderna COVID-19 Vaccine

Standing Orders for Administering Vaccine to Persons 18 Years of Age and Older

care if symptoms of myocarditis or pericarditis develop after vaccination.<sup>‡</sup>

- For people who received a COVID-19 vaccine that is not currently authorized in the United States, guidance can be found at: <https://www.cdc.gov/vaccines/covid-19/info-by-product/clinical-considerations.html#not-authorized-vaccines>
- Moderna COVID-19 vaccine may be coadministered with other vaccines without regard to timing, including simultaneous administration.<sup>§</sup>
- For recommendations for COVID-19 vaccination and SARS-CoV-2 infection, see <https://www.cdc.gov/vaccines/covid-19/clinical-considerations/covid-19-vaccines-us.html#CoV-19-vaccination>

## ■ Screen for contraindications and precautions.

### ○ Contraindications:

- » Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a component of an mRNA COVID-19 vaccine (Moderna or Pfizer-BioNTech)
- » Immediate allergic reaction<sup>¶</sup> of any severity to a previous dose or known (diagnosed) allergy to a component of the vaccine (see <https://www.cdc.gov/vaccines/covid-19/clinical-considerations/covid-19-vaccines-us.html#Appendix-C> for a list of vaccine components)

**Note:** Persons who have a contraindication to an mRNA COVID-19 vaccine (Moderna or Pfizer-BioNTech) may be able to receive the Janssen COVID-19 Vaccine (see footnote).<sup>#</sup> Prior to administration of Janssen COVID-19 Vaccine, inform:

- Women 18-49 years of the increased risk of thrombosis with thrombocytopenia syndrome (TTS) in their age group.<sup>\*\*</sup>
- People with a history of Guillain-Barré Syndrome of the possible increased risk for GBS.
- These individuals can receive any FDA authorized or approved COVID-19 vaccine.

### ○ Precautions:

- » Most people determined to have a precaution to a COVID-19 vaccine at their appointment can and should be administered vaccine.
- » History of an immediate allergic reaction<sup>¶</sup> of any severity to any other vaccine or injectable therapy (i.e., intramuscular, intravenous, or subcutaneous vaccines or therapies)
  - This includes persons with a reaction to a vaccine or injectable therapy that contains multiple components, one of which is polyethylene glycol (PEG) or another vaccine component, but for whom it is unknown which component elicited the immediate allergic reaction.
  - People with a contraindication to Janssen COVID-19 Vaccine have a precaution to both mRNA vaccines (see footnote).<sup>#</sup>
- » Moderate to severe acute illness

\* For a list of conditions associated with moderate to severe immune compromise, see: <https://www.cdc.gov/vaccines/covid-19/clinical-considerations/covid-19-vaccines-us.html#considerations-additional-vaccine-dose>

† If the second dose is administered less than 24 days after the first dose (4-day grace period), the dose should be repeated. The repeat dose should be spaced at least 28 days after the improperly administered Moderna dose.

‡ Educational materials are available at [www.cdc.gov/coronavirus/2019-ncov/vaccines/safety/myocarditis.html](http://www.cdc.gov/coronavirus/2019-ncov/vaccines/safety/myocarditis.html)

§ When deciding whether to coadminister COVID-19 vaccine and other vaccines, providers should consider whether the patient is behind or at risk of becoming behind on recommended vaccines. They should also consider the patient's risk of vaccine-preventable diseases (e.g., during an outbreak) and the reactogenicity profile of the vaccines.

¶ An immediate allergic reaction is defined as any hypersensitivity-related signs or symptoms such as urticaria, angioedema, respiratory distress (e.g., wheezing, stridor), or anaphylaxis that occur within 4 hours following exposure to a vaccine or medication.

# Consider consultation with an allergist-immunologist to help determine if a patient with a contraindication to an mRNA vaccine can safely receive the Janssen COVID-19 Vaccine. Healthcare providers and health departments may also request a consultation from the Clinical Immunization Safety Assessment COVIDvax project. Vaccination of these individuals should only be done in an appropriate setting under the supervision of a healthcare provider experienced in the management of severe allergic reactions.

- People with a contraindication to mRNA COVID-19 vaccines (including due to a known PEG allergy) have a precaution to Janssen COVID-19 vaccination. People who have previously received an mRNA COVID-19 vaccine dose should wait at least 28 days to receive Janssen COVID-19 Vaccine.

- People with a contraindication to Janssen COVID-19 Vaccine (including due to a known polysorbate allergy) have a precaution to mRNA COVID-19 vaccination.

\*\* Educational materials are available at: <https://www.cdc.gov/coronavirus/2019-ncov/vaccines/safety/JJUpdate.html>

Sex and Weight of Patient	Needle Gauge	Needle Length	Injection Site <sup>†</sup>
Female or male fewer than 130 lbs	22–25	5/8 <sup>§</sup> – 1"	Deltoid muscle of arm
Female or male 130–152 lbs	22–25	1"	Deltoid muscle of arm
Female 152–200 lbs	22–25	1–1½"	Deltoid muscle of arm
Male 152–260 lbs	22–25	1–1½"	Deltoid muscle of arm
Female 200+ lbs	22–25	1½"	Deltoid muscle of arm
Male 260+ lbs	22–25	1½"	Deltoid muscle of arm

† Alternately, the anterolateral thigh can be used. A 1.5-inch needle may be used if administering vaccine in this site.

§ Some experts recommend a 5/8-inch needle for men and women who weigh less 130 pounds. If used, skin must be stretched tightly (do not bunch subcutaneous tissue).

# Moderna COVID-19 Vaccine

## Standing Orders for Administering Vaccine to Persons 18 Years of Age and Older

- Provide all recipients with a copy of the current federal Emergency Use Authorization (EUA) Fact Sheet for Recipients and Caregivers.
  - Prepare to administer the vaccine. Choose the correct needle gauge, needle length, and injection site for persons:
    - 18 years of age:
      - » Needle gauge/length: 22-25 gauge, 1-inch.
      - » Site: Deltoid muscle of arm.
    - 19 years of age and older: See chart above.
  - Follow the manufacturer's guidance for storing/handling punctured vaccine vials.
  - Administer Moderna COVID-19 Vaccine by intramuscular (IM) injection
    - 0.5 mL for primary series and additional dose (moderately to severely immunocompromised persons)
    - 0.25 mL for booster dose 3
  - Document vaccination.
    - COVID-19 vaccination providers must document vaccine administration in their medical record systems within 24 hours of administration and use their best efforts to report administration data to the relevant system (e.g., immunization information system) for the jurisdiction as soon as practicable and no later than 72 hours after administration.
    - Document each recipient's vaccine administration information:
      - » Medical record: The vaccine and the date it was administered, manufacturer, lot number, vaccination site and route, name and title of the person administering the vaccine
      - » Vaccination record card: Date of vaccination, product name/manufacturer, lot number, and name/location of the administering clinic or healthcare professional. Give to the vaccine recipient.
      - » Immunization information system (IIS): Report the vaccination to the appropriate state/local IIS.
  - Additional preparation and administration information including booster dose information is available on the manufacturer's website at <https://www.modernatx.com/>.
  - Be prepared to manage medical emergencies.
    - Vaccination providers should observe patients after vaccination to monitor for the occurrence of immediate adverse reactions, including syncope:
      - » **30 minutes:** Persons with a:
        - History of an immediate allergic reaction of any severity to a vaccine or injectable therapy
        - Contraindication to Janssen COVID-19 Vaccine who receive Moderna COVID-19 Vaccine
      - History of anaphylaxis due to any cause
    - » **15 minutes:** All other persons
  - Syncope may occur in association with injectable vaccines, in particular among adolescents. Procedures should be in place to avoid falling injuries and manage syncopal reactions.
  - Have a written protocol to manage medical emergencies following vaccination, as well as equipment and medications, including at least 3 doses of epinephrine, H1 antihistamine, blood pressure monitor, and timing device to assess pulse.
  - Healthcare personnel who are trained and qualified to recognize the signs and symptoms of anaphylaxis as well as administer intramuscular epinephrine should be available at the vaccination location at all times.
  - For more information, please see:
    - » **Interim Considerations: Preparing for the Potential Management of Anaphylaxis after COVID-19 Vaccination** at <https://www.cdc.gov/vaccines/covid-19/info-by-product/pfizer/anaphylaxis-management.html>
    - » **CDC's General Best Practice Guidelines for Immunization, "Preventing and Managing Adverse Reactions,"** at <https://www.cdc.gov/vaccines/hcp/acip-recs/general-recs/adverse-reactions.html>
    - » **Immunization Action Coalition's "Medical Management of Vaccine Reactions in Adults in a Community Setting"** at <https://www.immunize.org/catg.d/p3082.pdf>
- Report adverse events to the Vaccine Adverse Event Reporting System (VAERS).
  - While this vaccine is under [Emergency Use Authorization \(EUA\)](#), healthcare professionals are required to report to VAERS:
    - » Vaccine administration errors (whether associated with an adverse event [AE] or not)
    - » Serious AEs (irrespective of attribution to vaccination)
    - » Multisystem inflammatory syndrome (MIS) in [adults](#) or [children](#)
    - » Cases of COVID-19 that result in hospitalization or death
    - » Any additional AEs and revised safety requirements per the [Food and Drug Administration's](#) conditions for use of an authorized vaccine throughout the duration of the EUA
  - Healthcare professionals are encouraged to report to [VAERS](#):
    - » Clinically important adverse events that occur after vaccination, even if you are not sure whether the vaccine caused the adverse event
